

# 2022 4-H Discover Science Method Research Poster Contest Rules & Guidelines

## INTRODUCTION

The 4-H Discover Science Method Research Poster Contest allows youth the opportunity to apply the scientific method to the subject matter they have learned through their 4-H projects. It is framed in principles of science, engineering, and technology. Participants will **1) construct a poster, 2) deliver a short oral presentation, and 3) respond to judges' interview questions.**

**\*\*\* CHANGE FOR 2022: NO WRITTEN REPORT REQUIRED. \*\*\***

Participants may enter in one of seven categories:

1. Biochemistry/microbiology/food science
2. Environmental science/chemistry/earth science
3. Animal science
4. Plant and soil science
5. Engineering/physics
6. Consumer product testing
7. Human behavior and social science

**Contest Objective:** To increase awareness of science, technology, engineering and mathematics (STEM) among 4-H members through research and experimentation.

## WHAT IS THE SCIENTIFIC METHOD?

The scientific method is a process for experimentation used to make observations and answer questions. Scientists use the scientific method to search for cause-and-effect relationships in nature. In other words, they design an experiment so that changes to one item cause something else to vary in a predictable way. Just as it does for a professional scientist, the scientific method will help you to focus your research poster project question, construct a hypothesis, design, execute, and evaluate your experiment.

The members of Texas A&M AgriLife will provide equal opportunities in programs and activities, education, and employment to all persons regardless of race, color, sex, religion, national origin, age, disability, genetic information, veteran status, sexual orientation or gender identity and will strive to achieve full and equal employment opportunity throughout Texas A&M AgriLife.

The scientific method is a process for experimentation that is used to explore observations and answer questions. Scientists use the scientific method to explore relationships in nature.

### Steps of the Scientific Method

1. Ask a question
2. Investigate previous research on the topic
3. Construct a hypothesis
4. Test hypothesis by performing an experiment
5. Analyze data and formulate results
6. Interpret results and draw a conclusion
7. Communicate results

**Step 1. Ask a Question:** The scientific method starts when you ask a question about something that you observe: How, What, When, Who, Which, Why, or Where? And, in order for the scientific method to answer the question it must be about something that you can measure, preferably with a number.

**Step 2. Investigate previous research on the topic:** Rather than starting from scratch in putting together a plan for answering your question, you want to be a savvy scientist using library and Internet research to help you find the best way to do things and ensure that you don't repeat mistakes from the past.

**Step 3. Construct a Hypothesis:** A hypothesis is an educated guess about how things work: "If \_\_\_\_ [I do this] \_\_\_\_, then \_\_\_\_ [this] \_\_\_\_ will happen." You must state your hypothesis in a way that you can easily measure, and of course, your hypothesis should be constructed in a way to help you answer your original question.

**Step 4. Test Your Hypothesis by Performing an Experiment:** Your experiment tests whether your hypothesis is true or false. It is important for your experiment to be a fair test. You conduct a fair test by making sure that you change only one factor at a time while keeping all other conditions the same. You should also repeat your experiments several times to make sure that the first results weren't just an accident.

**Step 5. Analyze Your Data and Formulate Results:** Once your experiment is complete, you collect your measurements and analyze them to see if your hypothesis is true or false. Scientists often find that their hypothesis was false, and in such cases, they will construct a

new hypothesis starting the entire process of the scientific method over again. Even if they find that their hypothesis was true, they may want to test it again in a new way.

**Step 6. Interpret Results and Draw a Conclusion:** What do the results mean? How can results be in a manner to support your conclusion?

**Step 7. Communicate Your Results:** To complete your project you will communicate your results to others in a poster format. Many professional scientists do almost exactly the same thing by presenting their results on a poster at a scientific meeting.

Even though we show the scientific method as a series of steps, keep in mind that new information or thinking might cause a scientist to back up and repeat steps at any point during the process. A process like the scientific method that involves such backing up and repeating is called an iterative process.

## CONTEST OVERVIEW

**Eligibility** – The 2022 4-H Roundup contest is for Senior Division 4-H members only.

Research projects may be an individual effort or conducted by a team of two 4-H members. Topics for the Texas 4-H Research Poster Contest should be age appropriate. Research should be of a nature that the 4-H member can design, experiment, analyze and draw conclusions. Past research poster projects are listed on page 10.

**Research Categories** – Individuals and teams must enter in one of seven categories. Topics may cover any field as long as it is research oriented and may include humanities or social sciences that meet the research criteria.

### 1. Biochemistry/Microbiology/Food Science

Biology of microorganisms – bacteriology, virology, protozoology, fungi bacterial genetics, yeast. The topic may also include chemistry of life processes such as molecular biology, molecular genetics, enzymes, photosynthesis, protein chemistry, food chemistry, hormones, etc. *Example: Compare different yeast fermentation techniques for converting sugar to alcohol.*

### 2. Environmental Science/Chemistry/Earth Sciences

Study of pollution sources (air, water, and/or land) and their control. Study of nature and composition of matter and laws governing it – physical chemistry, organic chemistry, inorganic chemistry, geology, mineralogy, oceanography, geography. *Example: Examine the effects of cropping practices on wildlife population.*

### 3. Animal Science

Study of animals – animal genetics, entomology, animal husbandry, animal physiology, studies of

invertebrates. *Example: Study the effects of growth hormones on meat or milk production.*

#### 4. Plant and Soil Science

Study of plant life – agriculture, agronomy, horticulture, forestry, plant taxonomy, plant genetics, etc. *Example: Study the effects of weather and soil conditions on plant growth.*

#### 5. Engineering/Physics

Technology projects that directly apply scientific principles to manufacturing and practical uses – mechanical, chemical, electrical, environmental engineering, etc. Theories, principles, and laws governing energy and the effect of energy on matter. *Examples: Compare the energy output and efficiency from different types of solar panels.*

#### 6. Consumer Product Testing

Comparison of product quality, effectiveness, usefulness, economy, cost, smell, environmental friendliness, etc. *Example: Compare the effectiveness of different household cleaning products on removing bacteria from kitchen surfaces.*

#### 7. Human Behavior and Social Science

Study of human thought processes and behavior in their interactions in the environment through observation and experimentation. *Examples: Triggers of fear, learned behavior, effect of color on choice, pecking order, and group size preference.*

### Judging Criteria

Entries are judged based on their adherence to the steps and principles of the Scientific Method. The contest requires a **research poster, oral presentation and interview.** **Change for 2022: No written report required.** All category entries will be judged together with 4<sup>th</sup> – 10<sup>th</sup> place announced at the contest location. The top three finalists will be announced during Roundup assembly to receive final placement and awards. The score sheet is provided on pages 12-13 of this document.

**Research Poster** – The poster should summarize each step of the Scientific Method as it relates to the project. **The poster must include the following components: descriptive title, list of authors, abstract, hypothesis, introduction, materials and methods, results, conclusions, and works cited.**

Following are suggestions for a good research poster:

- Good title – Your title is an attention getter. A good title should simply and accurately

present your project and its nature. The title should be no longer than 10 words.

- Nice visuals – Include photographs, drawings, charts, and graphs as appropriate to effectively communicate your project. Visuals should be clear and easy to interpret. Include headings and labels on graphs, charts, diagrams, and tables.
- Creative but logically organized – Your poster should be logically organized and easy to follow.
- Easy to read – The font size should be large enough to read from 3 feet away. The poster should include the information the judges will need without being crowded.

**Poster Guidelines:** Poster should be no larger than 48 inches wide by 30 inches deep (the distance from front to back) 108 inches high (from floor to top, includes table if project is on tabletop). Note that tables are generally 24 inches wide but can vary with convention location. Items that do not adhere to the poster must fit on the tabletop within the dimension of the unfolded poster. Avoid lights, banners, shelves, etc. that are outside of the poster dimensions.

### Research Journal

Each student should keep a research journal to chronical all research activity including meeting notes with County Extension Agents, details regarding your experiment, recorded raw data, and other information as appropriate. Each member of a research team should keep his/her own personal journal. The journal will not be judged in the contest, but students are encouraged to bring it to the competition in case judges would like to see more data or detailed procedures.

**Oral Presentation and Interview** – Contestants will give a 7 to 10-minute presentation and have a short interview. If contestants enter as a team, both team members must have a speaking role during the presentation. Following are suggestions for presenting your poster:

- Be sure to state the title and purpose of your project. Provide a brief explanation of why you selected the topic and why it is important to you.
- Speak in a loud and clear voice.
- Use vocabulary which demonstrates knowledge of the subject matter.
- Stay relaxed and use good posture. Avoid fidgeting and maintain eye contact with judges.
- Practice your presentation and anticipate the types of questions a judge may ask.

## Project Certification (by County Extension Agent or designee)

**The County Extension Agent or their designee must approve all projects.** The County Extension Agent, with special emphasis on research projects that involved human and animal subjects, must also review and certify compliance with the Human Vertebrate Endorsement or Non-Human Vertebrate Endorsement forms (if applicable). These forms are located on pages 17-18 this document.

## Entry Procedure and Deadline

Individuals or a team of two students may enter the contest in one of the seven categories previously listed.

To enter, complete the **Entry Form, County Extension Agent Approval Form, Human Vertebrate Endorsement Form (if applicable)** and **Non-Human Vertebrate Endorsement Form (if applicable)** located on pages 14-17.

Upload all forms when you register at 4-H Connect. *Entries received after this date may not be included in the contest.*

## Suggested Project Activity

### 1. Set meeting with County Extension Agent

- a. Take information with you to outline your research project.
- b. Discuss and narrow down topic.
- c. Discuss your experiences related to this topic and why you are interested.
- d. Review safety guidelines with County Extension Agent and parents.
- e. Review articles or books on the topic that interest you.
- f. Plan an initial project timeline of project activity.
- g. Record meeting notes in your research journal and date it.

### 2. Generate Research Question and Hypothesis

- a. Write your inquiry question.
- b. Begin with what you know.
- c. Write why you want to conduct an experiment on the subject.
- d. Determine if you have sufficient resources to conduct the experiment.
- e. Set meeting with County Extension Agent to discuss your question and hypothesis.

### 3. Design Research and Conduct Investigation

- a. Write your hypothesis (what you think will happen).
- b. Research variables (what they are, and what type of variables) and what controls are needed for experiment.
- c. List the materials and methods you will use and the experimental procedures you will follow.
- d. Set meeting with County Extension Agent to discuss your experiment.

#### 4. Perform Experiment

- a. Gather all the materials you will need to begin your experiment.
- b. Journal entries should be as complete as possible.
- c. Notes are the way to put your observations down so later you can find answers.
- d. Dates, times, and thoughts you have about the experiment should be written.
- e. Plan data records that need to be collected.
- f. Conduct experiment or research.
- g. Collect and organize data.
- h. Set regular meetings with your County Extension Agent to report the progress of your research.
  - i. Take your research journal each time so each of you sign and date the meeting notes page.
  - ii. Bring out any unique things you are recording in your journal.
  - iii. Write down ideas from other research projects that interest you from your work.
  - iv. Begin thinking of how to organize information to put on the poster.

#### 5. Analyze Data

- a. Identify any patterns in results.
- b. Explicitly use results to answer the question and test the hypothesis.
- c. Point out sources of errors or limitations.
- d. Develop your presentation and sketch your poster display layout.
- e. Set meeting with County Extension Agent to review your journal and to plan your final poster layout.
- f. Draft your poster.
- g. Practice your poster presentation among different groups.
- h. Share results with others in your community and gather feedback.
- i. Finalize your poster based on feedback.
- j. Now relax – the hard work is over. Now enjoy telling everyone about it at Roundup!

## RESEARCH AND POSTER EXHIBIT SAFETY

### Research Safety

Safety should be a primary concern for every science experiment. Almost any tool or technique, no matter how safe, can be used in an unsafe manner. At the same time, many potentially dangerous tools are perfectly safe if they are used in the proper way. So how do you know if your project is within reasonable safety guidelines? Science Buddies ([www.sciencebuddies.org](http://www.sciencebuddies.org)) recommends you ask three simple questions to test your project's level of safety.

Is it safe for other people or animals that are involved? All projects involving humans as subjects must involve minimal risk. Unacceptable risks include ingestion of any substance or physical contact with any potentially hazardous materials, as well as unnecessary physical, psychological, or emotional stress, including invasion of privacy. Even if you are simply

surveying other students, you should review your questions in advance and decide if the questions meet this test and determine if a parent/guardian's consent is needed for any students that are participating. If you are not sure, do not hesitate to ask your County Extension Agent, parent, or mentor to help you decide.

Live animals (in particular vertebrate animals-those with a backbone) should be housed, cared for, and observed in a safe and humane manner.

If you are participating in another science fair at your classroom or school fair, does your project meet the safety rules for that higher-level fair? If you will be participating in a city or county-wide fair, make sure that the projects meet the rules of that fair. Science fairs affiliated with the Intel International Science and Engineering Fair (ISEF) must follow very strict and detailed safety rules, often including pre-approval before experimentation begins. The Science Buddies website has an overview of these rules on the Scientific Review Committee (SRC) page.

Finally, have you addressed safety concerns to your parents' and County Extension Agent's satisfaction? Make sure you address all safety issues in your project proposal so that your adult supervisors are aware of any issues ahead of time. Your County Extension Agent will then evaluate your project based on the following questions:

1. Where will the experiment be performed?
2. What safety gear will be used?
3. Who will be supervising the experiment?
4. Are you knowledgeable about or do you have training in the procedures being used?

If in doubt about the safety of the experiment, ask your County Extension Agent, parent, or mentor for advice. Be prepared to choose another project if your County Extension Agent decides that yours does not meet age appropriateness or the safety guidelines. Hopefully good common sense and the questions above will help you put together a fun, informative, and safe research project.

### Poster Exhibit Safety

1. If an exhibit becomes unsafe or unsuitable for display, it will be removed and deemed ineligible for any awards.
2. Projects which involve vertebrate animal subjects must conform to the following statement: **Experiments on live animals involving surgery, the removal of parts, injection of harmful chemicals, and/or exposure to harmful environments, are not acceptable at the Discover Scientific Method Research Poster Contest.** Live vertebrates are not permitted at the Discover Scientific Method Research Poster Contest.
3. Toxic and hazardous chemicals are prohibited.

4. All necessary chemical glassware must be displayed in a stable manner. The items must be back from the edge of the table and may not be operational at any time.
5. 4-H Member should substitute colored water, photographs or drawings for chemicals.
6. Crystals, other than sucrose (sugar) and sodium chloride (salt), may not be displayed. Projects involving crystals can be represented by pictures or other three-dimensional models.
7. Hypodermic needles and syringes may not be displayed in any exhibit at the Discover Scientific Method Research Poster Contest.
8. It is critically important that no person be exposed to any bacteria that are considered pathogenic. Therefore, the following two rules are very important: **No wild cultures incubated above room temperature; no cultures taken from humans or other warm-blooded animals may be used.** This includes, but is not limited to skin, throat and mouth.
9. Plastic petri dishes must be sealed.
10. Lasers may not be used in any exhibit.
11. Dangerous and combustible materials are prohibited.
12. No exhibit shall have open flames. Any part of an exhibit that can get hotter than 100 degrees Celsius (boiling water temperature) must be adequately protected from its surroundings.
13. If an exhibit includes electrical wiring or devices, they must be safe. For voltages above 20 volts, special precautions must be taken. All connections must be secure and provide suitable protection against short circuits, etc.
14. All wiring carrying more than 20 volts must be well insulated. Also, the connections must either be soldered or secured by UL approved fasteners. The wire used must be insulated adequately for the maximum voltage that will be present and the wire must be of sufficient size to carry the maximum current you anticipate. Open knife switches or doorbell-type push buttons in circuits using more than 20 volts may not be used.
15. If the exhibit will be connected to 120-volt AC power (plugged into a wall outlet) fuses or circuit breakers must be provided to protect not only the exhibit but also any others that may share the same sources of power. The power cord used must be UL approved for the voltage and current it will be carrying, and it must be at least 1.8 meters (6 feet) long. Discover Scientific Method Research Poster Contest staff must be notified of the need for power at the time of certification so power can be ordered in advance.
16. Exhibits requiring voltage in excess of 120 volts AC are not allowed.

## PAST CONTEST ENTRIES

- *Tannins as a Gibberellin Antagonist – Phase 2.* “The purpose of this research project focused on identifying the potential relationship between juniper tannins and native grass seeds, ...”
- *City Life and Water Pollution.* The purpose of this project was to test the hypothesis: “If a city has a higher population, then the pollution of the water will be greater.”
- *Effects of Calcium Levels on Eggshell Strength.* “The purpose of this experiment was to compare the compressive strength of eggs, laid by hens fed lay pellets plus added protein and given plain tap water to drink, hens fed lay pellets plus added protein given plain tap water with a calcium supplement to drink and then hens fed lay pellets plus added protein and given plain tap water to drink to test the calcium withdrawal effects at the end of weeks one and two following the removal of the calcium from the tap water.”
- *Effects of Different Hydroponic Systems on Plant Growth.* “The purpose of this project is to explore plant growth and output using three recommended hydroponic systems in a controlled inside location.”
- *Effects of Different Water Types on Germination Rate.* “The objective of this experiment was to compare the germination rate among different cotton seed varieties with different water sources; H<sub>2</sub>O Clean, Alkali, and Salt.”
- *The Ups and Downs of Kinetic Energy.* “The objective was to determine if the mass of a ball affected its kinetic energy.”
- *Shocking! A Study of Electrocoagulation in River Water.* “Our project tested two hypothesis: 1) that an Elequa electrocoagulation system would improve measures of Total Dissolved Solids (TDS), coliform, and *Escherichia coli* bacteria when compared to a control; and 2) that improvement would be related to the type of electrodes used – 4-aluminum (4Al), 4-iron (4Fe), and a 2-aluminum /2-iron combination (2Al/2Fe).”
- *How does Caffeine affect Goldfish?* “The objective of this experiment was to see if caffeine that is dissolved in wastewater has an effect on fish.”
- *Here’s the Scoop on Poop.* “This experimental project was conducted to test the effect of different animal manures (horse, cow, and chicken) as fertilizers when used on corn seeds and corn plants.”

## Texas 4-H Discover Science Method Research Poster Contest – Score Sheet

<b>4-Her's Name(s):</b>
<b>Category:</b>
<b>Project Title:</b>

<b>Part 1: Poster Display</b>		
	<b>Possible Points:</b>	<b>Points Earned:</b>
Does the poster contain all required components (descriptive title, list of authors, abstract, hypothesis, introduction, materials and methods, results, conclusions, and works cited)?	<b>10</b>	
Is the project original and creative?	<b>10</b>	
Are graphics appropriate for the project?	<b>10</b>	
Are graphs, charts, diagrams, and tables properly labeled?	<b>10</b>	
Are colors, fonts, and formats appealing and easy to read?	<b>10</b>	
<b>TOTAL (PART 1)</b>	<b>50</b>	

<b>PART 2: Oral Presentation and Interview</b>		
	<b>Possible Points:</b>	<b>Points Earned:</b>
Did the 4-Her(s) speak in a loud, clear voice?	<b>10</b>	
Did the 4-Her(s) use vocabulary which demonstrated an in-depth knowledge of the topic?	<b>10</b>	
Did the 4-Her(s) use appropriate posture, body language, and eye contact?	<b>10</b>	
Did the 4-Her(s) state the title and purpose of the project and explain the reason for the topic selection?	<b>10</b>	
Was the 4-Her(s) well prepared and knowledgeable on the project?	<b>10</b>	
<b>TOTAL (PART 2)</b>	<b>50</b>

# Human Vertebrate Endorsement Form (if applicable)

Recognizing that human beings are vertebrate animals and yet need different criteria than Nonhuman vertebrates, the following policies will govern the use of human beings.

1. No projects involving human cultures of any type (mouth, throat, skin or otherwise) are allowed. However, tissue cultures purchased from reputable biological supply houses or research facilities are suitable for student use.
2. Projects that involve taste, color, texture or any other choice are allowed, but are limited to preference only. Quantities of normal food and non-alcoholic beverages are limited to normal serving amounts or less. No project may use drugs, food or beverages in order to measure their effect on a person.
3. The only human blood that may be used is that which is either obtained through a blood bank, hospital or laboratory. No blood may be drawn by any person or from any person specifically for a science project. This rule does not preclude a student making use of the data collected from blood tests not made exclusively for a science project.
4. Projects that involve exercise and its effect on pulse, respiration rate and blood pressure are approved, if valid, normal physical examination is on file and the exercise is not carried to extreme.
5. Projects that involve learning, ESP, motivation, hearing, vision and surveys are allowed. No project will be allowed that is in violation of these rules.
6. No person may perform any experiment for the student that violates any of the rules.

In this space, briefly describe the use of humans in your project. Use the back of this page if necessary.

The signatures of the student(s) and the CEA indicate this project conforms to the above rules.

# Non-Human Vertebrate Endorsement Form (if applicable)

These rules are strictly enforced. Students and advisors using non-human vertebrates in their project must complete this form. The signature of the student and the advisor indicate the project was done within the rules and regulations of

1. Intrusive techniques used cannot exceed momentary pain and must comply with commonly accepted livestock management procedures.
2. Changing an organism's normal environment by using either aversive stimuli or predatory/prey conditions to study behavior/operant conditioning is prohibited.
3. Food and water cannot be used or withheld for more than 24 hours for maze running and other learning or conditioning activities.
4. The student and advisor have the responsibility to see that animals are properly cared for in a well-ventilated, lighted and warm location with adequate food, water and sanitary conditions. Care must be taken to see that organisms are properly cared for during weekends and vacation periods.
5. Chicken or other bird embryo projects must be terminated at or before ninety-six hours.
6. Projects that involve behavioral studies or newly hatched chickens or other birds will be allowed, provided no change has been made in the normal incubation and hatching of the organism and all vertebrate rules are followed.

In this space, briefly describe the use of vertebrate animals in your project. Use the back of this page if necessary.

The signatures of the student(s) and the CEA indicate this project conforms to the above rules.
